                     /lab_host="DH10B (T1 phage resistant)"
                     /clone_lib="NIH_BMAP_GV0"
                     /note="Organ: Brain; Vector: pYX- Asc; Site_1: EcoR I;
                     Site_2: Not I; The library was constructed according
                     Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
                     1996. Denatured RNA was size fractionated on a 1% agarose
                     gel.First strand cDNA synthesis was primed with oligo-dT
                     primer containing a Not I site. Double strand cDNA was
                     size selected according to mRNA size fraction,ligated with
                     EcoR I adaptor, digested with NotI and then cloned
                     directionally into pYX-Asc vector. The library tag
                     sequence located between the Not I site and the polyA tail
                     is CGAACTGAAT. This library was created for the University
                     Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the
                     Developing Mouse Nervous System', supported by National
                     Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,
                     program coordinator."

                     Site_2: Not I; The library was constructed according
                     Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
                     1996. Denatured RNA was size fractionated on a 1% agarose
                     gel.First strand cDNA synthesis was primed with oligo-dT
                     primer containing a Not I site .Double strand cDNA was
                     size selected according to mRNA size fraction ,ligated
                     with EcoR I adaptor , digested with NotI and then cloned
                     directionally into pYX-Asc vector . The library tag
                     sequence located between the Not I site and the polyA tail
                     is TTATTGAAGT. This library was created for the University
                     Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the
                     Developing Mouse Nervous System', supported by National
```

Institute of Mental Health (NIMH)."

/note="Site_1: SalI; Site_2: BamHI; cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. 1st strand cDNA was primed with a primer [5' GAGAGAGAGAAGGATCCAAGAGCTCTTTTTTTTTTTTTTTTVN 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. cDNA went through one round of normalization to Rot = 10.0 and subtraction to Rot = 100.0. Second strand cDNA was prepared with the primer adapter of sequence [5' GAGAGAGAGATTCTCGAGTTAATTAAATTAATCCCCCCCCCCCCCC 3']. cDNA was cloned into the XhoI and BamHI sites. Vector: a modified pBluescript KS(+) after bulk excision from Lambda FLC I. Cloning sites, 5' end: SalI; 3' end: BamHI"

                     Site_2: Not I; The library was constructed according
                     Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
                     1996. Denatured RNA was size fractionated on a 1% agarose
                     gel. First strand cDNA synthesis was primed with oligo-dT
                     primer containing a Not I site. Double strand cDNA was
                     size selected according to mRNA size fraction, ligated
                     with EcoR I adaptor, digested with NotI and then cloned
                     directionally into pYX-Asc vector. The library tag
                     sequence located between the Not I site and the polyA tail
                     is AGCGAGACAG. This library was created for the University
                     Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the
                     Developing Mouse Nervous System', supported by National
                     Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,
                     program coordinator."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT Novel recombinant cell cycle polypeptide, tankyrase H useful for inducing
PT or preventing cell proliferation in cells, and for diagnosing, treating
PT or preventing cell cycle associated disorders such as cancer.
XX
PS Claim 13; Fig 1; 63pp; English.
XX
CC This sequence encodes the Tankyrase homologue isotype 1 (TaHo-1) protein

CC of the invention. The invention also relates to the TaHo-2 protein. The
CC TaHo proteins are useful for inducing or preventing cell proliferation in
CC cells, and in the study or treatment of conditions mediated by the cell
CC cycle proteins, such as to diagnose, treat or prevent cell cycle
CC associated disorders, preferably cancer. The TaHo coding sequences are
CC useful as hybridisation probes, in chromosome and gene mapping and in the
CC generation of anti-sense DNA and RNA. The coding sequences are also
CC useful for the preparation of TaHo, for generating either transgenic
CC animals or knock out animals which, in turn, are useful in a development
CC and screening of therapeutically useful agents, in gene therapy, as
CC vaccine, and for construction of hybridisation probes for mapping the
CC gene which encodes TaHo and for the genetic analysis of individuals with
CC genetic disorders. The TaHo proteins, and their coding sequences are
CC useful in screening assays

PT New recombinant nucleic acid encoding a cell cycle protein, useful for
PT diagnosing and treating a cell cycle related disorder, e.g. cancer.
XX
PS Claim 13; Fig 1A-B; 90pp; English.
XX
CC This invention describes a novel recombinant nucleic acid encoding the
CC cell cycle protein TaHo, a tankyrase H isoform. The products of the
CC invention have cytostatic and immunostimulant activity and can be used
CC for gene therapy and in vaccines. The cell cycle protein TaHo and the
CC nucleic acid encoding the protein are useful for diagnosing and treating
CC a cell cycle related disorder, e.g. cancer, or for inhibiting growth of a
CC tumour cell. The methods are useful for screening for a bioactive agent
CC capable of binding to a cell cycle protein tankyrase H, or a bioactive
CC agent capable of modulating a cell cycle protein tankyrase H or PARP
CC (poly ADP-ribose polymerase) activity. The antibodies are useful for
CC inducing an immune response against the cell cycle proteins. This
CC sequence encodes the tankyrase H isoform 1, TaHo-1, isolated from clone
CC TH-1 which is described in the disclosure of the invention

PT Novel recombinant cell cycle polypeptide, tankyrase H useful for inducing
PT or preventing cell proliferation in cells, and for diagnosing, treating
PT or preventing cell cycle associated disorders such as cancer.
XX
PS Claim 13; Fig 2; 63pp; English.
XX
CC This sequence encodes the Tankyrase homologue isotype 2 (TaHo-2) protein
CC of the invention. The invention also relates to the TaHo-1 protein. The
CC TaHo proteins are useful for inducing or preventing cell proliferation in
CC cells, and in the study or treatment of conditions mediated by the cell
CC cycle proteins, such as to diagnose, treat or prevent cell cycle
CC associated disorders, preferably cancer. The TaHo coding sequences are
CC useful as hybridisation probes, in chromosome and gene mapping and in the
CC generation of anti-sense DNA and RNA. The coding sequences are also
CC useful for the preparation of TaHo, for generating either transgenic
CC animals or knock out animals which, in turn, are useful in a development
CC and screening of therapeutically useful agents, in gene therapy, as
CC vaccine, and for construction of hybridisation probes for mapping the
CC gene which encodes TaHo and for the genetic analysis of individuals with
CC genetic disorders. The TaHo proteins, and their coding sequences are
CC useful in screening assays

PT New recombinant nucleic acid encoding a cell cycle protein, useful for
PT diagnosing and treating a cell cycle related disorder, e.g. cancer.
XX
PS Claim 13; Fig 2A-B; 90pp; English.
XX
CC This invention describes a novel recombinant nucleic acid encoding the
CC cell cycle protein TaHo, a tankyrase H isoform. The products of the
CC invention have cytostatic and immunostimulant activity and can be used
CC for gene therapy and in vaccines. The cell cycle protein TaHo and the
CC nucleic acid encoding the protein are useful for diagnosing and treating
CC a cell cycle related disorder, e.g. cancer, or for inhibiting growth of a
CC tumour cell. The methods are useful for screening for a bioactive agent
CC capable of binding to a cell cycle protein tankyrase H, or a bioactive
CC agent capable of modulating a cell cycle protein tankyrase H or PARP
CC (poly ADP-ribose polymerase) activity. The antibodies are useful for
CC inducing an immune response against the cell cycle proteins. This
CC sequence encodes the tankyrase H isoform 2, TaHo-2, isolated from clone
CC K23 which is described in the disclosure of the invention

PT Novel mammalian Tankyrase II polypeptide and the polynucleotide encoding
PT the polypeptide useful for modulating or maintaining telomere length,
PT replicative capacity, apoptosis, chromosome packing or gene expression.
XX
PS Claim 1; Fig 4; 52pp; English.
XX
CC The present sequence is a version of the human tankyrase II coding
CC sequence. Its protein is thought to be involved in signal transduction in
CC the cell, and to have binding activity for other telomere-associated
CC proteins. It is possible that it plays a role in the regulation of
CC telomere length, thus affecting the replicative ability of the cell. The
CC protein is useful for ribosylating target proteins, for determining
CC tankyrase II binding activity in a sample, and for modulating telomere
CC length in a cell

PT New insulin signaling protein SPANK, useful for reducing body mass,
PT glucose intolerance or insulin resistance and for preventing or treating
PT obesity-related and muscle-related diseases.
XX
PS Claim 3; Fig 4; 65pp; English.
XX
CC This sequence represents the human SPANK cDNA. The SPANK protein
CC comprises 3 domains: (a) a SAM (sterile alpha motif) domain; (b) a PARP
CC (poly adenosine diphosphate-ribose polymerase) catalytic domain; and (c)
CC an ANK domain composed of ankyrin repeats. SPANK is a cytosolic protein
CC which can poly(ADP-ribosyl)ate itself. SPANK binds insulin-responsive
CC aminopeptidase (IRAP) and modulates translocation of GLUT4 in the
CC perinuclear region of adipocytes. It is an effector in the insulin
CC signalling pathway in eukaryotic cells. SPANK is useful for reducing body
CC mass, reducing glucose intolerance or insulin resistance, for preventing
CC or treating obesity-related diseases or disorders, such as obesity,
CC cardiac insufficiency, coronary insufficiency, stroke, hypertension,
CC atheromatous disease, atherosclerosis, high blood pressure, non-insulin
CC dependent diabetes, hyperlipidaemia, hyperuricemia and Syndrome X and is
CC also useful for preventing or treating muscle-related diseases or
CC disorders, such as muscular dystrophy, muscle atrophy and muscle fatigue.
CC Antibodies immunospecific for SPANK are useful for detecting the presence
CC of SPANK polypeptide in a biological sample

PT New tankyrase2 polypeptides, useful for treating conditions mediated by
PT poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT inflammatory and autoimmune disorders.
XX
PS Example 1; Page 158-162; 242pp; English.
XX
CC The present invention provides the protein and coding sequence for the
CC human tankyrase2 protein. This is found in two different versions,
CC designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC ribosylation activity and is involved in the modification of TRF1, which
CC is a telomere-specific binding protein. The regulation of telomere
CC length, in which TRF1 has a role, is linked to ageing and cancer. The
CC sequences are useful in the treatment of cancers and inflammatory
CC disorders

PT New tankyrase2 polypeptides, useful for treating conditions mediated by
PT poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT inflammatory and autoimmune disorders.
XX
PS Claim 6; Page 195-200; 242pp; English.
XX
CC The present invention provides the protein and coding sequence for the
CC human tankyrase2 protein. This is found in two different versions,
CC designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC ribosylation activity and is involved in the modification of TRF1, which
CC is a telomere-specific binding protein. The regulation of telomere
CC length, in which TRF1 has a role, is linked to ageing and cancer. The
CC sequences are useful in the treatment of cancers and inflammatory
CC disorders

PT New polynucleotides comprising sequences assembled from expressed
PT sequence tags (ESTs), useful for treating cell-proliferative,
PT neurodegenerative, autoimmune, genetic, myeloid or lymphoid, or platelet
PT or coagulation disorders.
XX
PS Claim 1; SEQ ID NO 556; 1012pp + Sequence Listing; English.
XX
CC The invention relates to an isolated polynucleotide (I) comprising a
CC nucleotide sequence selected from any of 948 sequences (ABZ11119-
CC ABZ12066) or their mature protein coding portion, active domain coding
CC protein or complementary sequences. The polynucleotides are useful for
CC identifying expressed genes or for physical mapping of human genome. The
CC encoded polypeptides (ABP68902-ABP69849) are useful as molecular weight
CC markers, as a food supplement, for generating antibodies, in medical
CC imaging, screening and diagnostic assays and for treating cell-
CC proliferative disorders (cancer), neurodegenerative diseases (Parkinson's
CC or Alzheimer's disease), autoimmune diseases (multiple sclerosis,
CC diabetes, lupus) genetic disorders, myeloid or lymphoid disorders,
CC platelet or coagulation disorders, wound, burns, incision, ulcers, liver
CC or lung fibrosis, infections (bacterial, viral, fungal, parasitic),
CC arthritis, etc. Note: The sequence data for this patent did not form part
CC of the printed specification, but was obtained in electronic format
CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Diagnosing colon cancer in a subject comprises identifying colon cancer-
PT   associated polypeptides as antigens that elicit immune response in colon
PT   cancer.
XX
PS   Claim 1; Page 85-89; 122pp; English.
XX
CC   The invention relates to a method for diagnosing colon cancer in a
CC   subject which comprises identifying colon cancer-associated polypeptides
CC   as antigens that elicit immune response in colon cancer. The method is
CC   useful for diagnosing, determining onset, progression, or regression of
CC   colon cancer in a subject, or for selecting a course of treatment of a
CC   subject having or suspected of having colon cancer. The colon cancer-
CC   associated polypeptides are useful as markers for diagnosing colon
CC   cancer, and for following the course of treatment of colon cancer. The
CC   present sequence is human colon cancer-associated polypeptide gene

PT   New tankyrase homolog protein (THP) polynucleotide and polypeptide useful
PT   in gene therapy, diagnosis and treatment or prevention of unregulated
PT   cell growth, such as cancer or tumor cell growth.
XX
PS   Claim 1; Page 41-42; 60pp; English.
XX
CC   The present sequence is a DNA coding for human tankyrase homolog protein
CC   (THP). The THP polypeptides and polynucleotides of the invention are
CC   useful in gene therapy and for treating or preventing unregulated cell
CC   growth such as cancer or tumour (e.g. basal cell carcinoma). The nucleic
CC   acid molecules of the invention and their fragments are useful for
CC   restriction fragment length polymorphism (RFLP) associated with certain
CC   disorders, as well as for genetic mapping. Antisense oligonucleotides, or
CC   fragments of nucleic acid encoding THP are useful as diagnostic tools for
CC   probing the expression of Thp gene in various tissues. THP can be used as
CC   antigens for raising antibodies against them and in assays for
CC   identifying compounds that modulate their activity. They are used in the
CC   manufacture of a medicament directed towards cancers or tumours. THP are
CC   also useful for screening compounds in a variety of drugs screening
CC   techniques and as a research tool for identification, characterisation
CC   and purification of interacting, regulatory proteins

PT   New candidate effector for the Grb7 family of signaling proteins, and
PT   specific antibody, useful for detection and treatment of cancer.
XX
PS   Claim 4; Fig 1; 24pp; English.
XX
CC   This is the nucleotide sequence of an isolated polynucleotide molecule
CC   encoding a candidate effector protein, termed 2.2412 (see AAY05734), for
CC   the Grb7 family of signalling proteins. A partial clone was isolated from
CC   a human liver cDNA library using a yeast two-hybrid system assay with
CC   Grb14 as bait. This clone was used to screen a human placental cDNA
CC   library that provided the C-terminal end of the 2.2412 sequence. A 5'
CC   sequence for the clone, including the initiation codon, was not
CC   identified. Analysis of the sequence revealed significant homology to a
CC   large number of proteins containing ankyrin-like repeats. The gene was
CC   localised to between chromosome 10q23.2 and proximal 10q23.32. Deletions
CC   in the 10q22-25 region have been detected in human breast, prostate,
CC   renal, small cell lung and endometrial carcinomas, glioblastoma
CC   multiforme, melanoma and meningiomas. Detection of the protein encoded by
CC   the 2.2412 cDNA in a sample should provide a useful tumour marker and/or
CC   prognostic indicator for certain human cancers, in particular breast
CC   cancer and prostate cancer. Antagonism of the interaction between Grb7
CC   family members and the encoded protein should provide a novel treatment
CC   strategy for human diseases exhibiting aberrant receptor tyrosine kinase
CC   signalling, such as cancer. Oligonucleotide probes can be used in methods
CC   of detecting the presence of 2.2412 mRNA in a sample

PT New tankyrase2 polypeptides, useful for treating conditions mediated by
PT poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT inflammatory and autoimmune disorders.
XX
PS Disclosure; Page 105-109; 242pp; English.
XX
CC The present invention provides the protein and coding sequence for the
CC human tankyrase2 protein. This is found in two different versions,
CC designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC ribosylation activity and is involved in the modification of TRF1, which
CC is a telomere-specific binding protein. The regulation of telomere
CC length, in which TRF1 has a role, is linked to ageing and cancer. The
CC sequences are useful in the treatment of cancers and inflammatory
CC disorders

XX
PT Novel mammalian Tankyrase II polypeptide and the polynucleotide encoding
PT the polypeptide useful for modulating or maintaining telomere length,
PT replicative capacity, apoptosis, chromosome packing or gene expression.
XX
PS Claim 1; Fig 2; 52pp; English.
XX
CC The present sequence is a version of the human tankyrase II coding
CC sequence. Its protein is thought to be involved in signal transduction in
CC the cell, and to have binding activity for other telomere-associated
CC proteins. It is possible that it plays a role in the regulation of
CC telomere length, thus affecting the replicative ability of the cell. The
CC protein is useful for ribosylating target proteins, for determining
CC tankyrase II binding activity in a sample, and for modulating telomere
CC length in a cell

PT   Novel mammalian Tankyrase II polypeptide and the polynucleotide encoding
PT   the polypeptide useful for modulating or maintaining telomere length,
PT   replicative capacity, apoptosis, chromosome packing or gene expression.
XX
PS   Disclosure; Fig 3; 52pp; English.
XX
CC   The present sequence is a version of the human tankyrase II coding
CC   sequence. Its protein is thought to be involved in signal transduction in
CC   the cell, and to have binding activity for other telomere-associated
CC   proteins. It is possible that it plays a role in the regulation of
CC   telomere length, thus affecting the replicative ability of the cell. The
CC   protein is useful for ribosylating target proteins, for determining
CC   tankyrase II binding activity in a sample, and for modulating telomere
CC   length in a cell

PT Diagnosing disorder characterized by expression of human cancer
PT associated antigen precursor, involves detecting interaction of an agent
PT with novel NA Group 1 nucleic acid molecule encoding the antigen
PT precursor.
XX
PS Example 8; Page 82-84; 87pp; English.
XX
CC The present sequence is given in a specification relating to nucleic
CC acids and encoded polypeptides which are cancer associated antigens
CC expressed in patients afflicted with breast cancer and/or T cell
CC leukaemia. A disorder characterised by expression of human cancer
CC associated antigen may be diagnosed by contacting a biological sample
CC with an agent that specifically binds to the nucleic acid that encodes
CC the antigen, complexed with human leukocyte antigen molecule, and
CC determining the interaction between the agent and the nucleic acid.
CC Cancer associated antigens, the nucleotides encoding them, antibodies
CC against them and the pharmaceutical compositions comprising them are
CC useful for diagnosing, monitoring and treating the diseases characterised
CC by the expression of one or more cancer associated antigens

PT New tankyrase2 polypeptides, useful for treating conditions mediated by

PT poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT inflammatory and autoimmune disorders.
XX
PS Example 1; Page 152-153; 242pp; English.
XX
CC The present invention provides the protein and coding sequence for the
CC human tankyrase2 protein. This is found in two different versions,
CC designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC ribosylation activity and is involved in the modification of TRF1, which
CC is a telomere-specific binding protein. The regulation of telomere
CC length, in which TRF1 has a role, is linked to ageing and cancer. The
CC sequences are useful in the treatment of cancers and inflammatory
CC disorders

PT New tankyrase2 polypeptides, useful for treating conditions mediated by
PT poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT inflammatory and autoimmune disorders.
XX
PS Example 1; Page 141-144; 242pp; English.
XX
CC The present invention provides the protein and coding sequence for the
CC human tankyrase2 protein. This is found in two different versions,
CC designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC ribosylation activity and is involved in the modification of TRF1, which
CC is a telomere-specific binding protein. The regulation of telomere
CC length, in which TRF1 has a role, is linked to ageing and cancer. The
CC sequences are useful in the treatment of cancers and inflammatory
CC disorders

CC The present invention provides the protein and coding sequence for the

CC human tankyrase2 protein. This is found in two different versions,
CC designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC ribosylation activity and is involved in the modification of TRF1, which
CC is a telomere-specific binding protein. The regulation of telomere
CC length, in which TRF1 has a role, is linked to ageing and cancer. The
CC sequences are useful in the treatment of cancers and inflammatory
CC disorders

PT New nucleic acid encoding vertebrate tankyrase, a regulator of telomere
PT length, used to identify modulators, e.g. for inhibiting growth of
PT cancer.
XX
PS Claim 5; Page 111-112; 133pp; English.
XX
CC The present cDNA sequence encodes human tankyrase, a TRF1 binding
CC protein. This cDNA was isolated from a human testis library. Tankyrase is
CC involved in regulation of telomere length through TRF1 and may directly
CC modulate the effect of TRF1. This gene is used to produce recombinant
CC tankyrase, or its fragments, and these are used to identify specific
CC modulators which are potential drugs to control telomere length
CC homeostasis for countering telomere shortening associated with aging
CC (e.g. atrophy of skin, macular degeneration or atherosclerosis) or
CC diseases such as ataxia telangiectasia. This can also be used to identify
CC homologous genes and in gene therapy (including antisense or ribozyme
CC expression). Transgenic animals having at least one disrupted endogenous
CC allele for tankyrase are used in drug screening

PT Novel mammalian Tankyrase II polypeptide and the polynucleotide encoding
PT the polypeptide useful for modulating or maintaining telomere length,
PT replicative capacity, apoptosis, chromosome packing or gene expression.
XX
PS Claim 1; Fig 6; 52pp; English.
XX
CC The present sequence is a version of the human tankyrase I coding
CC sequence. The invention relates to the isolation of the protein and
CC coding sequences of human tankyrase II. This protein is thought to be
CC involved in signal transduction in the cell, and to have binding activity
CC for other telomere-associated proteins. It is possible that it plays a
CC role in the regulation of telomere length, thus affecting the replicative
CC ability of the cell. The protein is useful for ribosylating target
CC proteins, for determining tankyrase II binding activity in a sample, and
CC for modulating telomere length in a cell

PT Nuclear localization signal (NLS)-tankyrase, for identifying modulators
PT to treat cancer, comprises NLS and a portion of tankyrase, that retains
PT ability to bind telomeric repeat binding protein 1 and NAD+-dependent ADP
PT -ribosylation activity.
XX
PS Disclosure; Page 127-129; 151pp; English.
XX
CC The invention discloses a nuclear localisation signal (NLS)-telomeric
CC protein tankyrase that comprises a NLS and at least a portion of a
CC tankyrase, that retains ability to bind telomeric, TTAGGG, repeat binding
CC factor 1 (TRF1) and its NAD+-dependent ADP-ribosylation activity.
CC Tankyrases (TRF1 interacting ankyrins) bind to the telomeric protein
CC TRF1, which is a negative regulator of telomere length maintenance, and
CC in so doing, counteracts its effect and play a role in lifecycle of a
CC cell. The protein is useful for identifying agents that modulate the
CC binding of TRF1 to its DNA binding site, for identifying agents that
CC modulate the effect of tankyrase on TRF1 in the nucleus of a cell, for
CC identifying the agents that modulate telomere length and for identifying
CC agents that modulate the tankyrase-dependent ADP-ribosylation of TRF1 in
CC the nucleus of a cell. An agent that inhibits ADP-ribosylation of TRF1
CC would hinder telomere lengthening and so is useful in the treatment of
CC cancer. A modulator which promotes ADP ribosylation of TRF1 would enhance
CC telomere lengthening and so could be useful for extending the lifetime of
CC the cell, especially self-renewing cells such as bone marrow cells,
CC peripheral blood, T and B cells. Tankyrases are also useful for
CC developing drugs that can counteract the telomere shortening associated
CC with aging and certain diseases such as ataxia telangiectasia. The
CC sequence presented is the human tankyrase cDNA

PT   New insulin signaling protein SPANK, useful for reducing body mass,
PT   glucose intolerance or insulin resistance and for preventing or treating
PT   obesity-related and muscle-related diseases.
XX
PS   Claim 3; Fig 5A; 65pp; English.
XX
CC   This sequence represents the mouse SPANK cDNA. The SPANK protein
CC   comprises 3 domains: (a) a SAM (sterile alpha motif) domain; (b) a PARP
CC   (poly adenosine diphosphate-ribose polymerase) catalytic domain; and (c)
CC   an ANK domain composed of ankyrin repeats. SPANK is a cytosolic protein
CC   which can poly(ADP-ribosyl)ate itself. SPANK binds insulin-responsive
CC   aminopeptidase (IRAP) and modulates translocation of GLUT4 in the
CC   perinuclear region of adipocytes. It is an effector in the insulin
CC   signalling pathway in eukaryotic cells. SPANK is useful for reducing body
CC   mass, reducing glucose intolerance or insulin resistance, for preventing
CC   or treating obesity-related diseases or disorders, such as obesity,
CC   cardiac insufficiency, coronary insufficiency, stroke, hypertension,
CC   atheromatous disease, atherosclerosis, high blood pressure, non-insulin
CC   dependent diabetes, hyperlipidaemia, hyperuricemia and Syndrome X and is
CC   also useful for preventing or treating muscle-related diseases or
CC   disorders, such as muscular dystrophy, muscle atrophy and muscle fatigue.
CC   Antibodies immunospecific for SPANK are useful for detecting the presence
CC   of SPANK polypeptide in a biological sample

PT   New combination comprising cDNAs that are differentially expressed in
PT   prostate cancer, useful for diagnosing, treating or monitoring the
PT   progression of treatment of prostate cancer.
XX
PS   Claim 5; SEQ ID NO 342; 42pp; English.
XX
CC   The invention relates to a combination comprising a number of cDNAs
CC   expressed in prostate cancer. The invention also relates to a method for
CC   detecting differential expression of one or more cDNAs in a sample
CC   containing nucleic acids by hybridising a substrate with the nucleic
CC   acids, thus forming one or more hybridisation complexes, detecting
CC   hybridisation complex formation and comparing the complexes formed with
CC   standard complexes, where differences between the standard and the sample
CC   complex formation indicate differential expression of cDNAs in the
CC   sample. The differential expression is diagnostic of prostate cancer. The
CC   invention also relates to proteins and antibodies related to the cDNAs.
CC   The combination is useful for diagnosing, treating or monitoring the
CC   progression of treatment of prostate cancer. The antibodies are useful
CC   for detecting prostate cancer. This sequence represents a human prostate
CC   cancer cDNA of the invention.

PT   New nucleic acid encoding vertebrate tankyrase, a regulator of telomere
PT   length, used to identify modulators, e.g. for inhibiting growth of
PT   cancer.
XX
PS   Disclosure; Page 119-120; 133pp; English.
XX
CC   The present sequence encodes a truncated human tankyrase, a TRF1 binding
CC   protein. This DNA comprises the coding sequence for amino acid residues 1
CC   -640 of human tankyrase. Tankyrase is involved in regulation of telomere
CC   length through TRF1 and may directly modulate the effect of TRF1. This
CC   gene is used to produce recombinant tankyrase, or its fragments, and
CC   these are used to identify specific modulators which are potential drugs
CC   to control telomere length homeostasis for countering telomere shortening
CC   associated with aging (e.g. atrophy of skin, macular degeneration or
CC   atherosclerosis) or diseases such as ataxia telangiectasia. This can also
CC   be used to identify homologous genes and in gene therapy (including
CC   antisense or ribozyme expression). Transgenic animals having at least one
CC   disrupted endogenous allele for tankyrase are used in drug screening

PT Nuclear localization signal (NLS)-tankyrase, for identifying modulators
PT to treat cancer, comprises NLS and a portion of tankyrase, that retains
PT ability to bind telomeric repeat binding protein 1 and NAD+-dependent ADP
PT -ribosylation activity.
XX
PS Disclosure; Page 134-138; 151pp; English.
XX
CC The invention discloses a nuclear localisation signal (NLS)-telomeric
CC protein tankyrase that comprises a NLS and at least a portion of a
CC tankyrase, that retains ability to bind telomeric, TTAGGG, repeat binding
CC factor 1 (TRF1) and its NAD+-dependent ADP-ribosylation activity.
CC Tankyrases (TRF1 interacting ankyrins) bind to the telomeric protein
CC TRF1, which is a negative regulator of telomere length maintenance, and
CC in so doing, counteracts its effect and play a role in lifecycle of a
CC cell. The protein is useful for identifying agents that modulate the
CC binding of TRF1 to its DNA binding site, for identifying agents that
CC modulate the effect of tankyrase on TRF1 in the nucleus of a cell, for
CC identifying the agents that modulate telomere length and for identifying
CC agents that modulate the tankyrase-dependent ADP-ribosylation of TRF1 in
CC the nucleus of a cell. An agent that inhibits ADP-ribosylation of TRF1
CC would hinder telomere lengthening and so is useful in the treatment of
CC cancer. A modulator which promotes ADP ribosylation of TRF1 would enhance
CC telomere lengthening and so could be useful for extending the lifetime of
CC the cell, especially self-renewing cells such as bone marrow cells,
CC peripheral blood, T and B cells. Tankyrases are also useful for
CC developing drugs that can counteract the telomere shortening associated
CC with aging and certain diseases such as ataxia telangiectasia. The
CC sequence presented is the truncated human tankyrase #1 cDNA. Note:
CC Nucleotides 1-1925 are the same as the wild-type human tankyrase sequence

PT New tankyrase2 polypeptides, useful for treating conditions mediated by
PT poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT inflammatory and autoimmune disorders.
XX
PS Example 1; Page 154-156; 242pp; English.
XX
CC The present invention provides the protein and coding sequence for the
CC human tankyrase2 protein. This is found in two different versions,
CC designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC ribosylation activity and is involved in the modification of TRF1, which
CC is a telomere-specific binding protein. The regulation of telomere
CC length, in which TRF1 has a role, is linked to ageing and cancer. The
CC sequences are useful in the treatment of cancers and inflammatory
CC disorders

CC The invention discloses a nuclear localisation signal (NLS)-telomeric
CC protein tankyrase that comprises a NLS and at least a portion of a
CC tankyrase, that retains ability to bind telomeric, TTAGGG, repeat binding
CC factor 1 (TRF1) and its NAD+-dependent ADP-ribosylation activity.
CC Tankyrases (TRF1 interacting ankyrins) bind to the telomeric protein
CC TRF1, which is a negative regulator of telomere length maintenance, and
CC in so doing, counteracts its effect and play a role in lifecycle of a
CC cell. The protein is useful for identifying agents that modulate the
CC binding of TRF1 to its DNA binding site, for identifying agents that
CC modulate the effect of tankyrase on TRF1 in the nucleus of a cell, for
CC identifying the agents that modulate telomere length and for identifying
CC agents that modulate the tankyrase-dependent ADP-ribosylation of TRF1 in
CC the nucleus of a cell. An agent that inhibits ADP-ribosylation of TRF1
CC would hinder telomere lengthening and so is useful in the treatment of
CC cancer. A modulator which promotes ADP ribosylation of TRF1 would enhance
CC telomere lengthening and so could be useful for extending the lifetime of
CC the cell, especially self-renewing cells such as bone marrow cells,
CC peripheral blood, T and B cells. Tankyrases are also useful for
CC developing drugs that can counteract the telomere shortening associated
CC with aging and certain diseases such as ataxia telangiectasia. The
CC sequence presented is the truncated human tankyrase #2 cDNA. Note:
CC Nucleotides 1-2648 are the same as the wild-type human tankyrase sequence
CC (ABK48629)

PT   Human proteins and DNA encoding sequences useful for preventing, treating
PT   or ameliorating a medical condition in a mammalian subject e.g. arthritis
PT   and cancer.
XX
PS   Claim 1; Page 453; 1963pp; English.
XX
CC   Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and
CC   sequences ABA08225-ABA09574 represent nucleic acids encoding them. The
CC   invention also relates to vectors and recombinant host cells comprising a
CC   nucleotide of the invention, methods of producing the novel polypeptides,
CC   antibodies against the polypeptides, methods of detecting the nucleotides
CC   or polypeptides in a sample, and methods of identifying compounds which
CC   bind to polypeptides of the invention. Although novel, many of the
CC   polypeptides of the invention have homology to known proteins, thereby
CC   giving an insight into their probable biological activities, and hence
CC   potential therapeutic applications. The polypeptides of the invention may
CC   have various activities, including cytokine, cell proliferation or cell
CC   differentiation activities; stem cell growth factor activity;
CC   haematopoiesis regulatory activity; tissue growth activity;
CC   immunomodulatory activity; activin- or inhibin-related activities;
CC   chemotactic or chemokinetic activities; haemostatic, thrombotic or
CC   thrombolytic activities; receptor or ligand activities; or may be
CC   involved in oncogenesis, cancer cell proliferation or metastasis.
CC   Depending on their biological activities, polypeptides and nucleotides of
CC   the invention are useful for preventing, treating or ameliorating medical
CC   conditions, e.g., by protein or gene therapy. Such conditions include
CC   cancers, haematopoietic disorders (e.g.,myeloid or lymphoid cell
CC   disorders), chronic inflammatory conditions (e.g., asthma or arthritis),
CC   proliferative retinopathy, atherosclerosis, coronary heart disease,
CC   arterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal
CC   vascular growth. Polypeptides involved with tissue regeneration and
CC   repair (or nucleic acids encoding them) may be used to promote wound
CC   healing (e.g., of burns, incisions and ulcers), while those with
CC   immunomodulatory activities may be used in the treatment of viral,
CC   bacterial and fungal infections in addition to immune disorders.
CC   Polypeptides with growth factor activity may be used in cell cultures to
CC   promote cell growth. For example, such polypeptides may be used to
CC   manipulate stem cells in culture to give rise to neuroepithelial cells
CC   that can be used to augment or replace cells damaged by illness,
CC   autoimmune disease or accidental damage. The polypeptides and nucleotides
CC   may also be used in the diagnosis of the above conditions, and in drug
CC   screening techniques. The present sequence represents a cDNA encoding a
CC   novel human polypeptide of the invention

XX
CC The present sequence is given in a specification relating to nucleic
CC acids and encoded polypeptides which are cancer associated antigens
CC expressed in patients afflicted with breast cancer and/or T cell
CC leukaemia. A disorder characterised by expression of human cancer
CC associated antigen may be diagnosed by contacting a biological sample
CC with an agent that specifically binds to the nucleic acid that encodes
CC the antigen, complexed with human leukocyte antigen molecule, and
CC determining the interaction between the agent and the nucleic acid.
CC Cancer associated antigens, the nucleotides encoding them, antibodies
CC against them and the pharmaceutical compositions comprising them are
CC useful for diagnosing, monitoring and treating the diseases characterised
CC by the expression of one or more cancer associated antigens

PT   New tankyrase2 polypeptides, useful for treating conditions mediated by
PT   poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT   inflammatory and autoimmune disorders.
XX
PS   Example 7; Page 232-236; 242pp; English.
XX
CC   The present invention provides the protein and coding sequence for the
CC   human tankyrase2 protein. This is found in two different versions,
CC   designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC   ribosylation activity and is involved in the modification of TRF1, which
CC   is a telomere-specific binding protein. The regulation of telomere
CC   length, in which TRF1 has a role, is linked to ageing and cancer. The
CC   sequences are useful in the treatment of cancers and inflammatory
CC   disorders

PT New complex between two interacting proteins in adipocyte cells, useful
PT for identifying selected interacting domains that modulate protein
PT interactions, or for preventing or treating metabolic disorders such as
PT obesity or diabetes.
XX
PS Claim 7; Page 276; 382pp; English.
XX
CC The invention relates to a complex between two interacting proteins in
CC adipocyte cells, given in the specification. The proteins are identified
CC by selecting a bait protein from a known adipocyte marker and then
CC performing a yeast 2-hybrid selection to isolate prey proteins encoded by
CC members of an adipocyte cDNA library. The proteins are designated SID
CC (RTM) (selected interacting domains) proteins. Also included are a
CC polynucleotide encoding a polypeptide in the adipocyte cells, a
CC recombinant host cell expressing at least one of the interacting
CC polypeptides of the complex, selecting a modulating compound in adipocyte
CC cells, a SID (RTM)) polypeptide comprising any of the 738 amino acid
CC sequences given in the specification (including its fragment or variant),
CC a SID (RTM) polynucleotide comprising any of the 738 nucleotide sequences
CC given in the specification (including its fragment or variant), a vector
CC comprising the SID (RTM) polynucleotide, a recombinant host cell
CC comprising the vector, a protein chip comprising the polypeptides and a
CC record comprising all or part of the data, listed in the specification.
CC The complex, polypeptides, polynucleotides and compounds are useful for
CC preventing or treating metabolic disorders such as obesity or diabetes.
CC The polynucleotides are useful as probes or primers. The complex is
CC particularly useful for identifying selected interacting domains (SID
CC (RTM)) for screening drugs that modulate the protein interaction, thus
CC exhibiting the therapeutic effect. The present sequence encodes a SID
CC (prey) protein of the invention

PT   New tankyrase2 polypeptides, useful for treating conditions mediated by
PT   poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT   inflammatory and autoimmune disorders.
XX
PS   Example 6; Page 226-228; 242pp; English.
XX
CC   The present invention provides the protein and coding sequence for the
CC   human tankyrase2 protein. This is found in two different versions,
CC   designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC   ribosylation activity and is involved in the modification of TRF1, which
CC   is a telomere-specific binding protein. The regulation of telomere
CC   length, in which TRF1 has a role, is linked to ageing and cancer. The
CC   sequences are useful in the treatment of cancers and inflammatory
CC   disorders

PT   Primer sets for synthesizing polynucleotides, particularly the 5602 full-
PT   length cDNAs defined in the specification, and for the detection and/or
PT   diagnosis of the abnormality of the proteins encoded by the full-length
PT   cDNAs.
XX
PS   Claim 8; SEQ ID NO 15732; 2537pp + Sequence Listing; English.
XX
CC   The present invention describes primer sets for synthesising 5602 full-
CC   length cDNAs defined in the specification. Where a primer set comprises:
CC   (a) an oligo-dT primer and an oligonucleotide complementary to the
CC   complementary strand of a polynucleotide which comprises one of the 5602
CC   nucleotide sequences defined in the specification, where the
CC   oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC   of an oligonucleotide comprising a sequence complementary to the
CC   complementary strand of a polynucleotide which comprises a 5'-end
CC   sequence and an oligonucleotide comprising a sequence complementary to a
CC   polynucleotide which comprises a 3'-end sequence, where the
CC   oligonucleotide comprises at least 15 nucleotides and the combination of
CC   the 5'-end sequence/3'-end sequence is selected from those defined in the
CC   specification. The primer sets can be used in antisense therapy and in
CC   gene therapy. The primers are useful for synthesising polynucleotides,
CC   particularly full-length cDNAs. The primers are also useful for the
CC   detection and/or diagnosis of the abnormality of the proteins encoded by
CC   the full-length cDNAs. The primers allow obtaining of the full-length
CC   cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC   AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
CC   represent human amino acid sequences; and AAH13629 to AAH13632 represent
CC   oligonucleotides, all of which are used in the exemplification of the
CC   present invention

PT New tankyrase2 polypeptides, useful for treating conditions mediated by
PT poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers,
PT inflammatory and autoimmune disorders.
XX
PS Example 2; Page 210-215; 242pp; English.
XX
CC The present invention provides the protein and coding sequence for the
CC human tankyrase2 protein. This is found in two different versions,
CC designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-
CC ribosylation activity and is involved in the modification of TRF1, which
CC is a telomere-specific binding protein. The regulation of telomere
CC length, in which TRF1 has a role, is linked to ageing and cancer. The
CC sequences are useful in the treatment of cancers and inflammatory
CC disorders

PT New isolated nucleic acid detection reagent for detecting 1000 or more
PT genes from Drosophila and for elucidating cell signaling and cell-cell
PT interactions.
XX
PS Claim 1; SEQ ID NO 18947; 21pp + Sequence Listing; English.
XX
CC The invention relates to an isolated nucleic acid detection reagent
CC capable of detecting 1000 or more genes from Drosophila. The invention is
CC useful in developmental biology and in elucidating cell signalling and
CC cell-cell interactions in higher eukaryotes for the development of
CC insecticides, therapeutics and pharmaceutical drugs. The invention
CC discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
CC sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-
CC ABB72072). The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT New transgenic fly, containing DNA encoding an Abeta portion of human
PT APP, useful for identifying agents which modulate the APP pathway and
PT which can be used to treat Alzheimer's disease.
XX
PS Example 4; Page 112-113; 129pp; English.
XX
CC The invention relates to a transgenic fly whose genome comprises DNA
CC encoding a polypeptide having the Abeta portion of human amyloid
CC precursor protein (APP), fused to a signal sequence. The DNA sequence
CC encodes a 123 (Abeta40) or 129 (Abeta42) amino acid sequence, given in
CC the specification. The DNA sequence is operably linked to a tissue-
CC specific expression control sequence. Expression of the sequence gives
CC the fly an altered phenotype. The purpose of the invention is for
CC identifying agents that inhibit or promote the expression and/or function
CC of genes or encoded polypeptides which modify the APP pathway. The agent
CC is a compound, triple helix DNA, antisense oligonucleotide, double
CC stranded RNA molecule, ribozyme, or particularly an antibody. It is used
CC to treat conditions such as Alzheimer's disease. The agent can be used as
CC an APP pathway modulator or in gene therapy. This polynucleotide sequence
CC represents the DNA of the APP related human homologue hCP33787

PT Diagnosing disorder characterized by expression of human cancer
PT associated antigen precursor, involves detecting interaction of an agent
PT with novel NA Group 1 nucleic acid molecule encoding the antigen
PT precursor.
XX
PS Example 1; Page 78; 87pp; English.
XX
CC The present sequence is given in a specification relating to nucleic
CC acids and encoded polypeptides which are cancer associated antigens
CC expressed in patients afflicted with breast cancer and/or T cell
CC leukaemia. A disorder characterised by expression of human cancer
CC associated antigen may be diagnosed by contacting a biological sample
CC with an agent that specifically binds to the nucleic acid that encodes
CC the antigen, complexed with human leukocyte antigen molecule, and
CC determining the interaction between the agent and the nucleic acid.
CC Cancer associated antigens, the nucleotides encoding them, antibodies
CC against them and the pharmaceutical compositions comprising them are
CC useful for diagnosing, monitoring and treating the diseases characterised
CC by the expression of one or more cancer associated antigens

PT New combination comprising cDNAs that are differentially expressed in
PT prostate cancer, useful for diagnosing, treating or monitoring the
PT progression of treatment of prostate cancer.
XX
PS Claim 1; SEQ ID NO 341; 42pp; English.
XX
CC The invention relates to a combination comprising a number of cDNAs
CC expressed in prostate cancer. The invention also relates to a method for
CC detecting differential expression of one or more cDNAs in a sample
CC containing nucleic acids by hybridising a substrate with the nucleic
CC acids, thus forming one or more hybridisation complexes, detecting
CC hybridisation complex formation and comparing the complexes formed with
CC standard complexes, where differences between the standard and the sample
CC complex formation indicate differential expression of cDNAs in the
CC sample. The differential expression is diagnostic of prostate cancer. The
CC invention also relates to proteins and antibodies related to the cDNAs.
CC The combination is useful for diagnosing, treating or monitoring the
CC progression of treatment of prostate cancer. The antibodies are useful
CC for detecting prostate cancer. This sequence represents a human prostate
CC cancer cDNA of the invention.

CC   AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397,
CC   which represent the human ORFX open reading frames 1 to 3161. The ORFX
CC   sequences have activities such as: cytostatic; hepatotropic; vulnerary;
CC   antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic;
CC   anticonvulsant; antiarthritic; immunosuppressant; immunostimulant;
CC   cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive;
CC   dermatological; immunosuppressive; antiinflammatory; antibacterial;
CC   antiviral; antifungal; antirheumatic; antithyroid; and antianaemic. The
CC   sequences can be used for determining the presence of or predisposition
CC   to, or preventing or treating pathological conditions associated with an
CC   ORFX-associated disorder. The nucleic acids can be used to express ORFX
CC   proteins in gene therapy vectors. The proteins and nucleic acids may be
CC   used to treat cancers, proliferative disorders, neurodegenerative
CC   disorders, osteoarthritis, graft vs host disease, cardiovascular disease,
CC   diabetes mellitus, hypertension, hypothyroidism, cholesterol ester
CC   storage, systemic lupus erythematosus, severe combined immunodeficiency
CC   (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune
CC   disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and
CC   cartilage damage, nocturnal haemoglobinuria, antiinflammatory disease; to
CC   enhance coagulation; to inhibit thrombosis; and as a contraceptive

PT Primer sets for synthesizing polynucleotides, particularly the 5602 full-
PT length cDNAs defined in the specification, and for the detection and/or
PT diagnosis of the abnormality of the proteins encoded by the full-length
PT cDNAs.
XX
PS Claim 1; SEQ ID NO 5066; 2537pp + Sequence Listing; English.
XX
CC The present invention describes primer sets for synthesising 5602 full-
CC length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprising a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC sequence and an oligonucleotide comprising a sequence complementary to a
CC polynucleotide which comprises a 3'-end sequence, where the
CC oligonucleotide comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC specification. The primer sets can be used in antisense therapy and in
CC gene therapy. The primers are useful for synthesising polynucleotides,
CC particularly full-length cDNAs. The primers are also useful for the
CC detection and/or diagnosis of the abnormality of the proteins encoded by
CC the full-length cDNAs. The primers allow obtaining of the full-length
CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
CC represent human amino acid sequences; and AAH13629 to AAH13632 represent
CC oligonucleotides, all of which are used in the exemplification of the
CC present invention

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 11
AF264912
LOCUS AF264912 5810 bp mRNA linear PRI 14-MAY-2001
DEFINITION Homo sapiens tankyrase-like protein (TNKL) mRNA, complete cds.
ACCESSION AF264912
VERSION AF264912.1 GI:12005975
KEYWORDS .
SOURCE Homo sapiens (human)
ORGANISM Homo sapiens
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.
REFERENCE 1 (bases 1 to 5810)

RESULT 23
AX076214
LOCUS       AX076214                3498 bp    DNA     linear   PAT 06-FEB-2001
DEFINITION  Sequence 4 from Patent WO0104326.
ACCESSION   AX076214
VERSION     AX076214.1  GI:12710839
KEYWORDS    .
SOURCE      Homo sapiens (human)
  ORGANISM  Homo sapiens
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
            Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.
REFERENCE   1
  AUTHORS   Berthelsen,J., Toma,S. and Isacchi,A.
  TITLE     Tankyrase homolog protein (thp), nucleic acids, and methods related
            to the same
  JOURNAL   Patent: WO 0104326-A 4 18-JAN-2001;
            PHARMACIA & UPJOHN S.p.A. (IT)

HSM804989
LOCUS       HSM804989              4130 bp    mRNA    linear   PRI 10-JUL-2002
DEFINITION  Homo sapiens mRNA; cDNA DKFZp667A1222 (from clone DKFZp667A1222).
ACCESSION   AL833676
VERSION     AL833676.1  GI:21734324
KEYWORDS    .
SOURCE      Homo sapiens (human)
  ORGANISM  Homo sapiens
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
            Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.
REFERENCE   1  (bases 1 to 4130)
  AUTHORS   Duesterhoeft,A., Lauber,J., Mewes,H.W., Weil,B. and Wiemann,S.
  TITLE     Direct Submission
  JOURNAL   Submitted (09-JUL-2002) 1, D-85764 Neuherberg, GERMANY
COMMENT     Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
            Research Center (DKFZ); Email s.wiemann@dkfz-heidelberg.de;
            sequenced by Qiagen (Hilden/Germany) within the cDNA sequencing
            consortium of the German Genome Project.
            This clone (DKFZp667A1222) is available at the RZPD in Berlin.
            Please contact the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059
            Berlin-Charlottenburg, GERMANY; Email: clone@rzpd.de Further
            information about the clone and the sequencing project is available
            at http://mips.gsf.de/proj/cDNA/.

Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
Series: IRAK Plate: 126 Row: p Column: 6
This clone was selected for full length sequencing because it passed the following selection criteria: Similarity but not identity to protein.

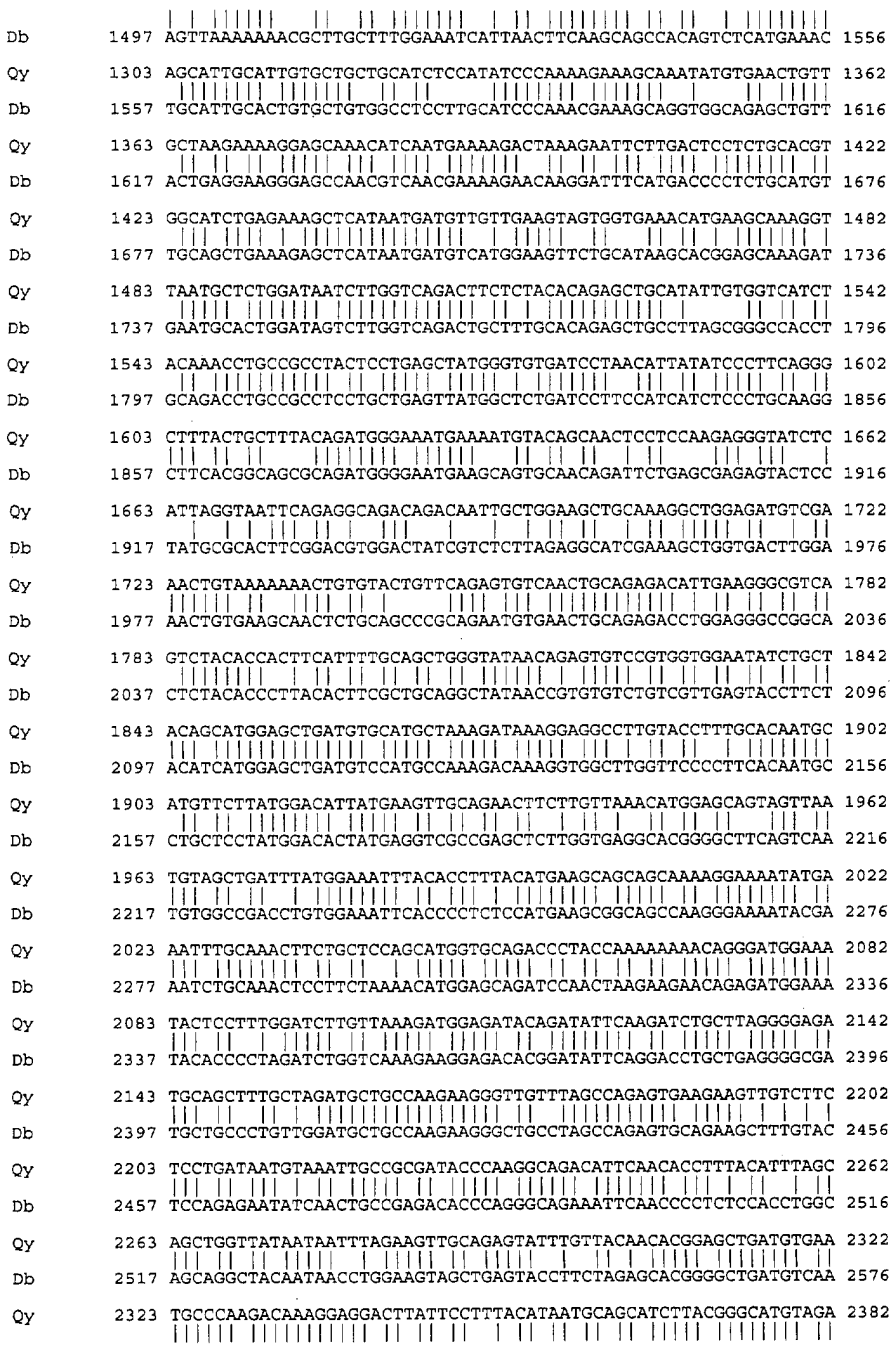
misc_feature 538. .1032
/note="Arp; Region: FOG: Ankyrin repeat [General function prediction only]"
/db_xref="CDD:COG0666"



misc_feature 3073. .3246
/note="SAM; Region: Sterile alpha motif. Widespread domain in signalling and nuclear proteins. In EPH-related tyrosine kinases, appears to mediate cell-cell initiated signal transduction via the binding of SH2-containing proteins to a conserved tyrosine that is phosphorylated. In many cases mediates homodimerisation"
/db_xref="CDD:smart00454"

misc_feature 3424. .3903
/note="PARP; Region: Poly(ADP-ribose) polymerase catalytic domain. Poly(ADP-ribose) polymerase catalyses the covalent attachment of ADP-ribose units from NAD+ to itself and to a limited number of other DNA binding proteins, which decreases their affinity for DNA. Poly(ADP-ribose) polymerase is a regulatory component induced by DNA damage. The carboxyl-terminal region is the most highly conserved region of the protein. Experiments have shown that a carboxyl 40 kDa fragment is still catalytically active"
/db_xref="CDD:pfam00644"

                     /clone_lib="L11SNU354"
                     /note="Organ: Liver; Vector: pCNS-D2; Site_1: EcoRI;
                     Site_2: NotI; The poly (A)+ RNA was dephosphorylated with
                     bacterial alkaline phosphatase (BAP) and then decapped
                     with tabacco acid pyrophosphatase (TAP). The decapped
                     intact mRNA was ligated with DNA-RNA linker including
                     EcoRI site by treatment of T4 RNA ligase and the first
                     strand cDNA was synthesized from oligo dT-selected mRNA by
                     priming with dT-tailed vector. The dT-tailed vector was
                     adjusted to have about 60nt. The cDNA vector was
                     circularized with E. coli DNA ligase after digestion of
                     EcoRI which site is also included in vector. An RNA strand
                     converted to a DNA strand by Okayama-Berg method. The
                     obtained cDNA vectors were used for transformation of
                     competent cells E. coli Top10F' by electroporation method.
                     The cDNA libraries constructed by this method are
                     full-length enriched cDNA library."

                     Site_2: Not I; The library was constructed according
                     BonaTdo, Lennon and Soares, Genome Research, 6:791-806,
                     1996. Denatured RNA was size fractionated on a 1% agarose
                     gel. First strand cDNA synthesis was primed with oligo-dT
                     primer containing a Not I site. Double strand cDNA was
                     size selected according to mRNA size fraction, ligated
                     with EcoR I adaptor, digested with NotI and then cloned
                     directionally into pYX-Asc vector. The library tag
                     sequence located between the Not I site and the polyA tail
                     is CGAACTGAAT. This library was created for the University
                     Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the
                     Developing Mouse Nervous System', supported by National
                     Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,
                     program coordinator."

/lab_host="DH10B (T1 phage resistant)"
/clone_lib="NIH_BMAP_HB0"
/note="Organ: Eye; Vector: pYX- Asc; Site_1: EcoR I; Site_2: Not I; The library was constructed according Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. Denatured RNA was size fractionated on a 1% agarose gel.First strand cDNA synthesis was primed with oligo-dT primer containing a Not I site .Double strand cDNA was size selected according to mRNA size fraction ,ligated with EcoR I adaptor , digested with NotI and then cloned directionally into pYX-Asc vector . The library tag sequence located between the Not I site and the polyA tail is TTATTGAAGT. This library was created for the University Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Institute of Mental Health (NIMH)."

/note="Organ: Brain; Vector: pYX- Asc; Site_1: EcoR I; Site_2: Not I; The library was constructed according Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. Denatured RNA was size fractionated on a 1% agarose gel. First strand cDNA synthesis was primed with oligo-dT primer containing a Not I site. Double strand cDNA was size selected according to mRNA size fraction, ligated with EcoR I adaptor, digested with NotI and then cloned directionally into pYX-Asc vector. The library tag sequence located between the Not I site and the polyA tail is CGAACTGAAT. This library was created for the University Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Institute of Mental Health (NIMH), Hemin Chin, Ph.D., program coordinator."

/lab_host="DH10B (T1 phage resistant)"
/clone_lib="NIH_BMAP_FW0"
/note="Organ: Brain; Vector: pYX- Asc; Site_1: EcoR I; Site_2: Not I; The library was constructed according Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. Denatured RNA was size fractionated on a 1% agarose gel. First strand cDNA synthesis was primed with oligo-dT primer containing a Not I site. Double strand cDNA was size selected according to mRNA size fraction, ligated with EcoR I adaptor, digested with NotI and then cloned directionally into pYX-Asc vector. The library tag sequence located between the Not I site and the polyA tail is AGCGAGACAG. This library was created for the University Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Institute of Mental Health (NIMH), Hemin Chin, Ph.D., program coordinator."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 9
US-09-509-196A-1
; Sequence 1, Application US/09509196A
; Patent No. US20020037582A1
; GENERAL INFORMATION:
; APPLICANT: DALY, Roger J.
; APPLICANT: SUTHERLAND, Robert L.
; TITLE OF INVENTION: A Potential Effector for the Grb7 Family of Signalling
; TITLE OF INVENTION: Proteins
; FILE REFERENCE: 1871-129
; CURRENT APPLICATION NUMBER: US/09/509,196A
; CURRENT FILING DATE: 2000-03-23
; PRIOR APPLICATION NUMBER: P09388
; PRIOR FILING DATE: 1997-09-23
; PRIOR APPLICATION NUMBER: PCT AU98/00795
; PRIOR FILING DATE: 1998-09-23
; NUMBER OF SEQ ID NOS: 2
; SOFTWARE: PatentIn Ver. 2.1
; SEQ ID NO 1
; LENGTH: 3400
; TYPE: DNA
; ORGANISM: Homo sapiens
US-09-509-196A-1

Query Match 86.8%; Score 3297; DB 9; Length 3400;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

US-09-427-154-1
; Sequence 1, Application US/09427154
; Patent No. 6589725
; GENERAL INFORMATION:
; APPLICANT: Luo, Ying
; APPLICANT: Chan, Eva
; APPLICANT: Xu, Xiang
; APPLICANT: Huang, Betty
; TITLE OF INVENTION: TANKYRASE H, COMPOSTIONS INVOLVED IN THE CELL CYCLE AND
; TITLE OF INVENTION: METHODS OF USE
; FILE REFERENCE: A-68292-DJB/RMS/DAV
; CURRENT APPLICATION NUMBER: US/09/427,154
; CURRENT FILING DATE: 1999-10-25
; NUMBER OF SEQ ID NOS: 9
; SOFTWARE: PatentIn Ver. 2.1
; SEQ ID NO 1
; LENGTH: 3394
; TYPE: DNA
; ORGANISM: Homo sapiens

RESULT 5
US-09-350-982C-3
; Sequence 3, Application US/09350982C
; Patent No. 6455290
; GENERAL INFORMATION:
; APPLICANT: Berthelsen, Jens
; APPLICANT: Toma, Salvatore
; APPLICANT: Isacchi, Antonella
; TITLE OF INVENTION: Tankyrase Homolog Protein(THP), Nucleic Acids, and Methods Rela
; TITLE OF INVENTION: Same
; FILE REFERENCE: PHRM-0043
; CURRENT APPLICATION NUMBER: US/09/350,982C
; CURRENT FILING DATE: 1999-07-09

```
;  NUMBER OF SEQ ID NOS:   10
;  SOFTWARE:   PatentIn version 3.0
; SEQ ID NO 3
;   LENGTH: 4512
;   TYPE: DNA
;   ORGANISM: Artificial
;   FEATURE:
;   OTHER INFORMATION: PCR Primers
;   NAME/KEY: misc_feature
;   LOCATION: (1124)..(1124)
;   OTHER INFORMATION: n is any nucleic acid
;   NAME/KEY: misc_feature
;   LOCATION: (2672)..(2672)
;   OTHER INFORMATION: n is any nucleic acid
